

National Guard Association of the United States

Resolution

Proposal Statement: In one sentence, please describe the specific item, program or legislation being proposed.

Procurement of an AI-driven software solution enabling warfighter and domestic response by providing unified operations, intelligence, and logistics to enhance military decision-making in both domestic response and conflict/contingency operations scenarios.

Recommendation Information: Use this box to further explain the changes being proposed above. This can identify policy, modernization program, equipment, status, states or personnel impacted.

The procurement and employment of an AI-driven, decision-support software solution that will enhance military decision-making and force readiness by unifying intelligence, operations, and logistics in a single platform to increase efficiency and empower planners and teams to collaboratively plan, execute, and analyze force readiness exercises, ensuring a streamlined and integrated approach to operational preparedness. By leveraging AI capabilities, opportunities exist to enhance real-time situational awareness, coordinate interagency operations, and manage logistics and sustainment in contested environments from hurricanes to border operations. Software should integrate with current user systems such as Microsoft 365 and Teams to further accelerate crisis action planning and response through document management and a unified interface.
