

DISASTERGPT™ & AI SOLUTIONS

Real-Time Information & Guidance with PRATUS™

OUR MISSION
Our mission: save lives, protect the environment, and build resilient communities through our decision-support technologies.

PROBLEM

Gaining real-time and accurate information during crises poses a challenge for crisis managers. Fragmented data sources from social media, news reports, internal systems, and field reports make compiling and sifting through information difficult. When crises hit, the flood of data can overwhelm, making it even harder to sift through the noise and find the crucial information needed for timely decisions. Given the rapid and unpredictable nature of crises, keeping up-to-date with information becomes more complex, complicating responses.

SOLUTION

PRATUS' DisasterGPT™, our AI decision-support solution, offers exercise and incident managers real-time situational awareness, enabling quicker and more effective crisis decisions. Through One Pane of Glass®, our platform centralizes data, giving you quick access to mission-critical information, including AutoSITREPS and after-action reports.

AUTOSITREPS

DisasterGPT's AutoSITREPs provide your team with current situational awareness by compiling data from third parties, customer datasets, and even user-proprietary data.

AI GUIDANCE

Our AI offers guidance on objectives, actions, and resources for incident management and seamlessly exports the information to an ICS form with a single click.

DISASTERCHAT

DisasterChat's Microsoft Teams capability summarizes role-based chats into a rolling report, facilitating clear communication and seamless transitions between shifts.
